PROFESSIONAL SUMMARY

Detail-oriented Full-Stack and Blockchain Developer with 3+ years of experience engineering secure, scalable web/mobile applications and smart contracts. Expertise spanning modern frontend architectures (React, Next.js), robust backend platforms (Node.js, PostgreSQL), and decentralised protocols (Solidity, Solana, Cairo). Demonstrated history of designing and shipping high-impact products for government agencies, businesses, and Web3 ecosystems.

TECHNICAL SKILLS

LANGUAGES

JavaScript (ES6+), TypeScript, Solidity, Cairo, Rust, SQL

FRONTEND & MOBILE

React, Next.js, React Native, Tailwind CSS, HTML5/CSS3, Shadcn/ui

BACKEND & DATABASE

Node.js, Express, PostgreSQL, RESTful APIs, DB Schema Design

TOOLS & DEVOPS

Git/GitHub, Docker, Anchor (Solana), NPM/Yarn, Linux, Vercel, Agile

WORK EXPERIENCE

Freelance Full-Stack & Web3 Developer | Self-Employed

Jan 2023 – Present

- Disaster Response Portal (Benue SEMA):** Engineered the official disaster management platform using React, Tailwind CSS, and Node.js. Developed critical reporting features that streamline incident notifications and map resources.
- Relief Distribution Ledger (Benue SEMA Chain):** Designed and deployed Solidity smart contracts on EVM-compatible networks to audit relief funds, ensuring complete transaction transparency and public trust.
- Fintech Commission Engine (Hybrid Agent):** Built a responsive, secure Next.js web application facilitating local and international commission settlements for property and vehicle transactions, shortening client payout cycles.
- E-Commerce storefront (Elysian Beddings):** Implemented a high-performance storefront with customized inventory management and clean shopping workflows, improving digital conversion rates.

Full-Stack Engineer | Blockfuse Labs

Jan 2024 – Dec 2025

- Web3 DApps & Smart Contracts:** Developed and integrated decentralized applications, writing secure Solidity smart contracts, building Solana programs in Rust with Anchor, and utilizing Cairo on Starknet.
- Frontend System Design:** Engineered responsive interfaces using React, Next.js, and Tailwind CSS, standardizing reusable component systems and ensuring pixel-perfect UI rendering.
- API & Database Management:** Built and maintained backend services using Node.js and Express.js, designing PostgreSQL database schemas and setting up secure authentication layers.
- Containerization & CI/CD:** Packaged services into Docker containers, streamlined local environment setups, and deployed applications to cloud hosting environments with automated pipelines.

SELECTED PROJECTS

Seven Hills Apartment — Booking & Listing Platform

React, Tailwind CSS, Next.js

- Developed a responsive property listing and room booking platform with dynamic showcases, real-time availability filters, and automated reservation workflows.
- Optimized image loading and asset delivery, enhancing page speeds and mobile performance for property search.

Benue Blockchain Fest — Conference Portal

React, Tailwind CSS, Web3

- Designed and launched the primary landing page and registration platform for a regional blockchain conference.
- Optimized SEO and page speed index scores, ensuring search engine rankings and zero-downtime during peak ticket registration.

EDUCATION & TRAINING

Full-Stack & Blockchain Development Program | Blockfuse Labs

Nigeria | 2025

- Completed intensive, hands-on training focusing on advanced frontend systems, backend engineering, and Web3 development including Solidity smart contracts and decentralised applications.
